Abstract: *Distance education is a way of implementing an educational process in which teaching and listening to the lesson can take place at a different location and at different times. Modern distance education is based on multimedia and Internet technologies, and is often called electronic education (e-education). Modern electronic educational technology is an important part of society today. E-learning efforts and experiments currently receive much attention across the globe. The availability of electronic and web-enabling technologies also dramatically influences the way we view the learning strategies of the future. Electronic learning (e-learning) is a process of transferring knowledge and skills electronically using appropriate computer applications, i.e. dedicated programs and environments in the learning process. This paper highlights the importance of using electronic learning for the purpose of regional development of education through the implementation and using of a Moodle platform for e-learning. The paper analyzes Educational creative center (ECC) in Bor (Eastern Serbia) as a case study of successful organization who dealing with e-learning and improvement of knowledge through distance learning in Serbia and in the surrounding countries.*

Keywords: *E-education, e-learning, Moodle learning platform, ECC*
